

# Part Number Description Sheet

The PowerFlare® Electronic LED Safety Light family of products comes in two models: non-rechargeable, powered by a standard CR123 Lithium battery, and rechargeable, powered by a rechargeable RCR123 Li-ion battery. The purpose of this sheet is to assist in the understanding of the part numbering system for each of those styles. The part numbers are designed to accurately describe the characteristics of the parts they are associated with. Once this is understood, the ordering of PowerFlare products becomes a much simpler and straight forward process.

## Non-Rechargeable Model

The non-rechargeable Safety Lights come in 8 different LED colors or combinations and 8 different outer shell colors. The below table shows the codes for each of those characteristics.

LED Colors	Code	Shell Colors	Code
Red .....	R	Yellow .....	Y
Amber .....	A	Orange .....	O
Blue .....	B	Olive Drab .....	OD
Green .....	G	Blue .....	BL
White .....	W	Tan.....	T
Infrared .....	I	Black.....	BK
Red/Amber Combo.....	RA		
Red/Blue Combo .....	RB		

The part number for a single PowerFlare non-rechargeable unit with red LEDs in a yellow shell is written as **PF210-R-Y**. The “PF210” is the model number. The first dash-number represents the LED color and the second dash-number specifies the outer shell color. A Safety Light with blue LEDs in an orange shell is written: **PF210-B-O**. Similarly, a Safety Light with infrared LEDs in an olive drab shell is written **PF210-I-OD**.

## Rechargeable Model

**PF6P-210R-R-Y**

The PowerFlare Rechargeable 6-Pack System consists of a charging box (part number *CHGR-206A*) and 6 rechargeable Safety Lights. Part numbers for the 6-Pack rechargeable systems look like this: **PF6P-210R-R-Y**. The “PF6P” stands for PowerFlare 6 Pack; the “210R” stands for the rechargeable style of the Safety Light; the first dash-number signifies the LED color, in this case red; and the second dash-number gives the outer shell color, in this case yellow.

The base model number for a single rechargeable light is “PF210R.” The LED and shell color codes are the same as the non-rechargeable (see above chart). For example, the part number for a single rechargeable Safety Light with red LEDs in a yellow shell is **PF210R-R-Y**. (Note: The rechargeable lights are offered individually as either replacements or as additional units for a charging system previously purchased. *They should not be purchased as stand-alone units because, without the charger box, there will be no way to recharge the battery once it is discharged.*)

## Soft-Pack Kits

The PowerFlare non-rechargeable kit consists of a number of non-rechargeable lights in a custom carry bag along with spare batteries. The photo to the right shows part number “**SP80-R-Y**.” This Soft-Pack Kit consists of 8 PowerFlare Safety Lights, 8 spare CR123 batteries, and an orange carrying bag. The product part number breaks down as follows: the “SP” stands for soft pack; the “8” means there are 8 lights and 8 spare CR123 batteries; the letter “O” (not zero) represents the bag color, orange; the first dash-number, “-R”, indicates the LED color, red; the second dash-number, “Y”, indicates the outer shell color, yellow.

**SP80-R-Y**

PowerFlare carry bags come in two sizes: small which holds up to 4 lights with spare batteries, and medium, which holds up to 8 lights with spare batteries.

All PowerFlare carry bags come in three colors: Camo Green (“CG”), Orange (“O”), and Yellow (“Y”).
