

Tech Note:

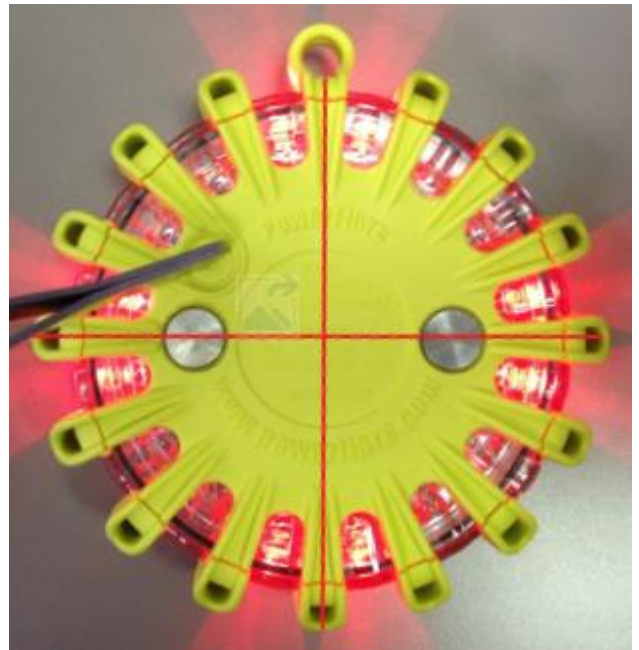

Distinguishing PF210 Series (non-rechargeable) from PF210R Series (rechargeable) PowerFlares

We frequently run into situations where there is a need to distinguish rechargeable units from non-rechargeable units. The rechargeable units have additional circuitry in place to be able to safely charge the Lithium-Ion batteries. Non-rechargeable units should not be placed on our chargers, as they pose a risk of catastrophic battery failure.

To identify which type of unit you have, press and hold the power button down. When you do this, every other set of lights will briefly (less than a second) light up. You can repeat this as many times as you need. Notice which ones light up. If they form an "X" (when the large loop/text is oriented upward) the unit is not rechargeable. If they form a "+", the circuitry is rechargeable and can be charged when the provided 3.6V RCR123 Lithium-Ion battery is installed.

PF210 Series Non-Rechargeable
